APPENDICES

Appendix A. Streams on the 2002 303(d) List That Have Been Delisting in 2004 For Reasons Related to Water Quality	134
Appendix B Streams on the 2002 303(d) List That Have Been Delisting in 2004 For Reasons Not Related to Water Quality	139
Appendix C. Federally Listed Endangered Aquatic Species In the State Of Tennessee	140

GUIDANCE FOR UNDERSTANDING AND INTERPRETING THE PROPOSED FINAL 2004 303(d) LIST

September, 2004

What Is the 303(d) List and Why Is It Important?

The 303(d) List is a compilation of the streams and lakes in Tennessee that are “water quality limited” or are expected to exceed water quality standards in the next two years and need additional pollution controls. Water quality limited streams are those that have one or more properties that violate water quality standards. They are considered impaired by pollution and not fully meeting designated uses.

Additionally, the 303(d) List prioritizes impacted streams for specialized studies called Total Maximum Daily Load (TMDL).

The 2004 303(d) List will update and replace the previous one published in 2002.

Once a stream has been placed on the 303(d) List, it is considered a priority for water quality improvement efforts. These efforts include traditional regulatory approaches such as permit issuance, but also include efforts to control pollution sources that have historically been exempted from regulations, such as certain agricultural and forestry activities.

If a stream is on the 303(d) List, the Division cannot authorize additional loadings of the same pollutant(s). In extreme cases, it may mean that dischargers will not be allowed to expand or locate on 303(d) listed streams until the sources of pollution have been controlled.

WHAT'S NEW FOR 2004

Reassessment of Group 1 and 2 Watersheds.

In developing the draft 2004 assessment, the Division used all readily available information. However, consistent with the Division's longterm use of a watershed approach, the major difference between the 2002 and 2004 versions of the List is the detailed reassessment of the Group 1 and 2 watersheds. It is in these areas of the state that the reviewer will note the most significant assessment changes.

The reassessment of the Group 1 and 2 streams and lakes has led to the incorporation of more precise water quality information. One by-product of this precision is the creation of smaller cataloging segments. In impaired watersheds, this precision at times leads to the creation of more, but smaller, segments. This appearance of more listed segments on the 2004 List should in no way lead the reader to conclude that more miles of stream are now impacted than in 2002.

Incorporation of Elements of EPA's Integrated Reporting Guidance.

During previous 303(d) cycles, the Division placed waterbodies into the traditional assessment categories of fully supporting designated uses, fully supporting but threatened, partially supporting, and not supporting. These categories were also used for the 305(b) Report.

As suggested by EPA, for purposes of 303(d) reporting, some different categories have been created. These categories are explained on the following page.

NEW 303(d) ASSESSMENT CATEGORIES FOR 2004

The new assessment categories suggested by EPA have been incorporated into the development of the 2004 303(d) List. Each stream or lake in Tennessee has been placed into one of the following categories.

Category 1	Waterbody or waterbody segment meets all designated uses.
Category 2	Waterbody or waterbody segment meets some designated uses, but data are not available in order to determine whether all uses are being met.
Category 3	Insufficient data exists to determine whether any uses are being met.
Category 4A	One or more uses are not being met. However, TMDLs have been completed and approved for all listed pollutants.
Category 4B	One or more uses are not being met. However, a TMDL is not needed because compliance with water quality standards will be achieved in the short-term by a more traditional approach, such as permitting or enforcement.
Category 4C	One or more uses are not being met. However, the impairment is not being caused by a pollutant.
Category 5	One or more uses are not being met. A TMDL is needed for the listed pollutants.

Notes concerning the above categories:

1. Tennessee did not place any segments into Category 4C. The Water Quality Control Act definition of a pollutant is broad enough that it captures all the causes of impairment that we can currently document. We are aware that some states will use this category for streams impacted by habitat alteration. However, Tennessee has successfully completed multiple habitat alteration TMDLs.
2. Additionally, we did not place any streams into Category 4B. If, during the public review period, listed streams are identified where traditional approaches such as permitting or enforcement will lead to water quality standards being met in the short-term, we will consider changing the category for those streams. However, it should be noted that this approach does not lead to the “delisting” of the segment, only to a change in category.
3. Category 4A was only used for those streams where all TMDLs have been completed. If additional TMDLs are needed in a segment, it was identified as Category 5.

Which Tennessee Streams Are Not On the 303(d) List?

Streams considered unpolluted (Categories 1 or 2), plus streams that the Division cannot assess due to a lack of water quality information (Category 3), are not found on the List. Thus, any stream not on the 303(d) List can be assumed to be unassessed or unpolluted. Appendix A contains a compilation of previously listed streams that the Division is proposing to “delist” on the basis that water quality has improved.

Appendix B contains a stream proposed for delisting on the basis that a compensatory mitigation project was approved to replace the lost resource value of the impacted stream.

Why Didn't the Division Place Any Waterbodies Into Category 4C?

At one time during the 90s, EPA advised states to not list streams if a TMDL would be of little practical benefit, such as when pollution has been caused by **historical** rather than by current activities. A good example would be lakes with a fishing advisory due to sediment contaminated with legacy chemicals from past discharges.

In 1998, EPA reversed this position and advised that these streams must be included on the 303(d) List and prioritized for future TMDL generation.

Our hope for EPA's integrated guidance was that Category 4C could be used for those streams where the Division and EPA agreed that a TMDL would be of little value in restoration. Instead, EPA set aside this category for streams where the impairment is not caused by a pollutant. This approach did not address the Division's concerns completely, since legacy conditions are still caused by a pollutant.

For the 2004 303(d) List, the Division has listed all impacted streams as uniformly needing a TMDL without regard for the probability of future success of such an activity.

How Were the Waters of Tennessee Assessed for this Document?

The assessment of Tennessee's waters was based on a water quality evaluation that took place during 2003 and early 2004. Water quality data collected at hundreds of streams in Tennessee were compared to existing water quality criteria (Chapter 1200-4-3-.03). Data were compared to numeric water quality criteria, or in the case of substances with narrative criteria (criteria based on verbal “free from” statements), data were compared to ecoregion reference stream data from the appropriate sub-ecoregion. (Note: streams dissimilar to the waterbodies in the reference stream database were not evaluated in this manner.)

On What Basis Can Waterbodies Be Removed From the 303(d) If They Were Listed In a Previous Version?

The 303(d) List is designed to be a flexible document that can be updated as new information becomes available. EPA must approve revisions to the document and has identified several acceptable reasons for removing or delisting a stream from the 303(d) List:

The stream was listed in error originally. An example of this might be if a water quality standard was improperly applied, such as the wrong hardness was used to calculate metals criteria.

In Appendix B of the proposed final 303(d) List, a stream in Chattanooga has been proposed for delisting on the basis that it should not have been listed originally for habitat alterations since the alterations were performed under permit. The Department approved a mitigation project for the unavoidable impacts to the stream that replaced the loss of resource values in the impaired stream.

The stream's status changes. A waterbody or a portion of a waterbody might be ruled a wet weather conveyance rather than a stream. (Different criteria apply to wet weather conveyances.)

Water quality standards change.

The 303(d) is a compilation of streams that violate state water quality standards. If standards change through the triennial review process, the list can be adjusted.

The stream has improved. If the quality of the stream improves and no longer violates the parameter(s) of concern, the stream can be removed from the List.

Documentation of the improvement is necessary.

Appendix A contains a list of the streams proposed for delisting due to water quality improvement. A rationale for each delisting is provided.

Did the Division Use All "Readily Available Data" In the Water Quality Assessment Process?

The Division utilized its own water quality data, plus that collected by other agencies and entities in Tennessee. EPA's STORET database was utilized as a primary source of water quality data. Additionally, the Tennessee Valley Authority, the U.S. Army Corps of Engineers, the U.S Geological Survey, and the Office of Surface Mining were contacted directly as none of these agencies currently use STORET.

In December of 2003, the Division issued a public notice informing Tennesseans that a statewide water quality assessment would be performed in 2004. The notice requested the submittal of water quality data. Most of the data submitted were from other agencies.

Are There Any Data Sources That the Division Chose To Not Use in the Assessment Process?

No. We used all the data that were submitted. However, it should be noted that not all data submitted were used to independently list streams as impacted. Where questions about sampling techniques or analysis methodologies could not be easily resolved, submitted data were used to screen streams for future studies.

During the review process for the draft 303(d), additional water quality data brought to our attention were factored into our final decision concerning the status of a stream. When asked, we happily discussed assessment decisions with individuals or groups.

Additionally, data may be submitted directly to EPA during their formal review of Tennessee's 303(d) List.

Data Submitted for Consideration in the 2004 303(d) Assessment Process

Agency	Physical Data	Biological Data	Chemical Data	Bacteriological Data
US Army Corp of Engineers		X	X	
US Office of Surface Mining	X		X	
Tennessee Valley Authority	X	X	X	X
US Geological Survey	X	X	X	X
Tennessee Wildlife Resources Agency	X	X		

What Is the Watershed Cycle?

In 1996, the Division of Water Pollution Control restructured monitoring and permitting activities on a rotating watershed basis. Each watershed will be examined on a five-year cycle as illustrated by the map on the next page.

A typical cycle will generally include:

Year 1 Hold planning meetings with "stakeholders". Stakeholders include citizens, environmental groups, other governmental agencies, municipalities, industries, and other interested parties. Develop a monitoring plan.

Year 2 Collect water quality data.

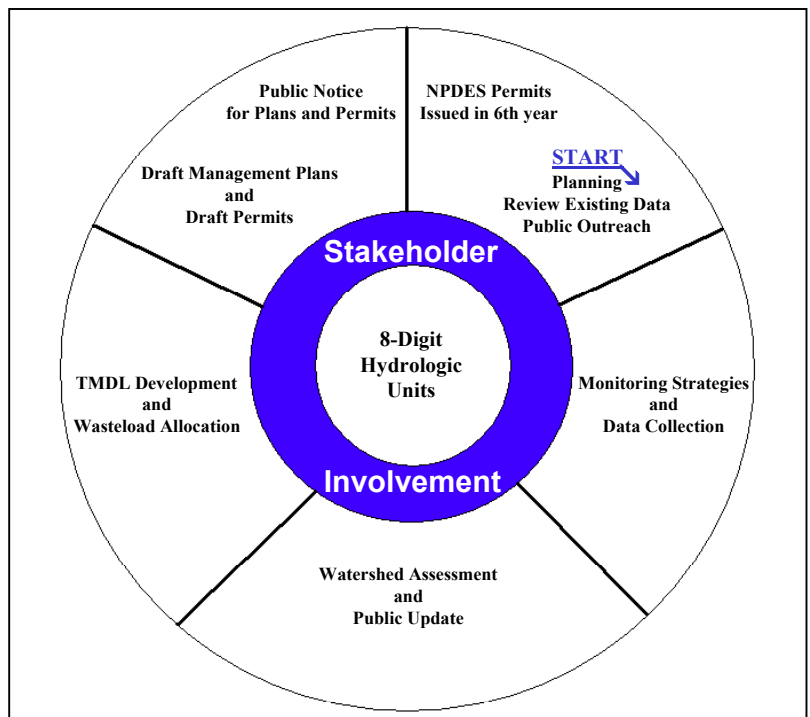

Year 3 Collect water quality data.

Year 4 Water quality assessment activities. Perform modeling and TMDL generation

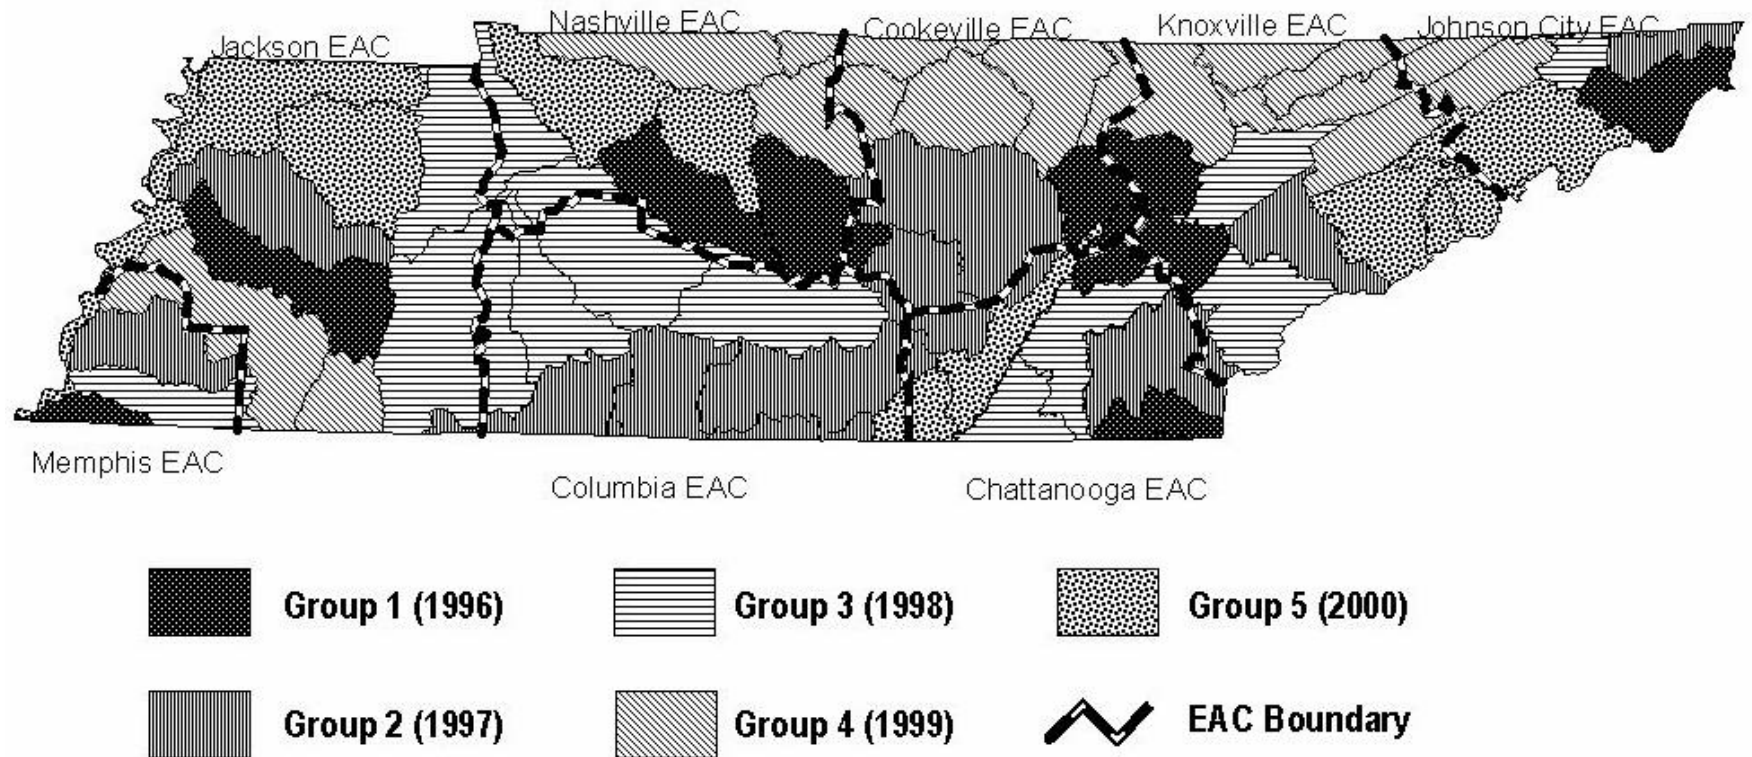

Year 5 Publish a watershed plan, which includes the proposed actions to be taken to insure that water quality standards will be met. Issue draft NPDES permits and hold public hearings.

Year 6 Issue final permits after comments have been addressed. Begin cycle again in sixth year.

Stream inventoried on the 303(d) List as violating one or more water quality criteria must be scheduled, on some priority basis, to have a TMDL developed to assist in the identification of control strategies.

Tennessee Watershed Management Approach

What Is a TMDL?

A Total Maximum Daily Load (TMDL) is a study that (1) quantifies the amount of a pollutant in a stream, (2) identifies the sources of the pollutant, (3) and recommends regulatory or other actions that may need to be taken in order for the stream to no longer be polluted. Following are actions that might be recommended:

- Re-allocate limits on the sources of pollutants documented as impacting streams. It might be necessary to lower the amount of pollutants being discharged under NPDES permits or to require the installation of other control measures, if necessary, to insure that standards will be met.
- For sources the Division does not have regulatory authority over, such as ordinary agricultural and forestry activities, provide information and technical assistance to other state and federal agencies that work directly with these groups to install appropriate BMPs.

Even for impacted streams on the 303(d) List, TMDL development is **not** considered appropriate for all bodies of water. Additionally, in cases involving pollution sources in other states, the recommendation may be that another state or EPA develop the TMDL.

How Are the TMDLs Prioritized?

Tennessee's TMDL prioritization schedule has been based on a 1998 agreement between EPA and the Department. Under this schedule, the Department committed to the development of all TMDLs for 303(d) listed streams by the year 2011. For its part, EPA committed to provide better guidance and new tools for TMDL generation.

A few years later, the same schedule was formalized by being included as part of a Consent Decree between EPA and environmental groups. Thus, for the next two years, the Division has decided to base its TMDL priority for each body of water on the 303(d) List based on the agreement reached with EPA.

How Did Citizens Participate in this Process?

The Division accepted written comments about the 303(d) List until August 3, 2004. Additionally, citizens provided verbal comments at a series of public meetings in June and July. The list of these meetings appears on the next page.

Attendance at the 2004 303(d) meetings was generally less than in 2002. Most of the meetings were attended by the local media. A number of attendees elected to make verbal comments about the draft. Additionally, numerous agencies and individuals submitted written comments.

A formal response was prepared for each, unless the original comment was clearly outside the scope of the 303(d) process. (However, at the public meetings, we attempted to answer all questions even if not directly related to the listing process.)

Our responses to the comments received during the review process are included in this document. The responses indicate whether or not a revision was made based on the specific comment received. If a comment did not result in a revision, we explained our rationale for not doing so.

If the 303(d) related comments of citizens have not been resolved to their satisfaction by the Department, concerns can be directed to EPA staff in Atlanta.

2004 303(d) List Public Meeting Schedule

WATERSHED	DATE	LOCATION	LOCAL TIME
Jackson	June 28, 2004	Main Auditorium TDOT Region IV Office 300 Benchmark Place, Jackson	2:00 pm
Dyersburg	June 28, 2004	Dyersburg Activities Center 1101 Shelby Dr. (off SR 211), Dyersburg	7:00 pm
Memphis	June 29, 2004	Memphis EAC Suite E-645 Perimeter Park 2510 Mount Moriah Road, Memphis	2:00 pm
Bartlett	June 29, 2004	Bartlett City Hall 6400 Stage Road, Bartlett	7:00 pm
Franklin	July 1, 2004	Auditorium, Williamson County Administrative Complex 1320 West Main Street, Franklin	7:00 pm
Nashville	July 6, 2004	Ruth Neff Conference Room 17 st Floor, L & C Tower 401 Church Street, Nashville	2:00 pm
Murfreesboro	July 6, 2004	Auditorium, Fleming Training Center 2022 Blanton Avenue, Murfreesboro	7:00 pm
Cookeville	July 8, 2004	Water Quality Building Cookeville Sewage Treatment Plant 1860 South Jefferson, Cookeville	7:00 pm
Elizabethton	July 12, 2004	Sycamore Shoals State Park Visitors Center Auditorium 1651 West Elk Avenue, Elizabethton	7:00 pm
Kingsport	July 13, 2004	Warriors Path State Park Visitors Center Auditorium Hemlock Road, Kingsport	2:00 pm
Cleveland	July 15, 2004	Auditorium, Coleman Community Service Building Cleveland State Community College 3535 Adkisson Drive, NW, Cleveland	7:00 pm
Chattanooga	July 16, 2004	Room 607 State Office Building 540 McCallie Ave, Chattanooga	1:30 pm
Wartburg	July 19, 2004	Main Courtroom 415 North Kingston Morgan County Courthouse, Wartburg	7:00 pm
Knoxville	July 20, 2004	Knoxville Environmental Assistance Center Conference Room 2700 Middlebrook Pike, Knoxville	2:00 pm

Proposed Final Version of the 2004 303(d) List

Summary of Public Comments and Division Responses

(Note: in some instances, public comments have been summarized in order to group similar observations by multiple reviewers.)

I. GENERAL COMMENTS: Review Process

I-1. *The draft 303(d) was compiled in a manner inconsistent with federal regulations.*

Response: We believe that our draft 303(d) is compiled properly and is consistent with federal regulations. Additionally, the list will be reviewed by EPA to insure compliance with federal law and regulations.

I-2. *The draft 303(d) public review process was inappropriately short. The comment period should be extended.*

Response: The draft 303(d) List was made available for review on June 10. We held 14 public meetings in 14 different cities between June 28 and July 20. The almost two month comment period officially ended on August 3, 2002. It should be noted that public comments concerning Tennessee's proposed final 303(d) List could also be directed to EPA. We believe that the public review timeframe was reasonable.

I-3. *Notice to the public about the availability of the draft 303(d) was inadequate.*

Response: The draft 303(d) List was posted on the department's website on June 10, the same day that the public notices were mailed. It was posted on the department's "What's New" site the next morning.

Additionally, the department issued numerous press releases about the 303(d) List and the public meetings. Several newspaper articles were written in response to the press releases and the meetings were well-attended by the media. In the pages following the department's responses to comments is a timeline of activities undertaken by us to get the word out about the 303(d) review process. We feel that we have met both the letter and spirit of the public notice requirements.

I-4. *When a draft 303(d) becomes available, the division should have paper copies for the public.*

Response: We had paper copies available shortly after the document was posted on the Web. Additionally, we handed out paper copies at all of the public meetings. We thought it preferable to go ahead and post the document on the web where most people could see it, rather than to delay the beginning of the review period until we had paper copies.

I-5. *Citizens cannot conveniently attend afternoon public meetings.*

Response: Our approach to scheduling public meetings was to combine afternoon and evening meetings within a general area. In each section of the state, citizens could choose whether to attend an afternoon meeting or an evening one, depending on their own scheduling needs.

I-6. *The commenter requests an individual response to their concerns about the 303(d) List.*

Response: It would be impractical to provide an individual response to each commenter. Additionally, it would be unfair to the other reviewers of the list if they could not read and consider the department's responses to the questions raised by the other commenters.

I-7. *The division disregards data and comments submitted by citizens.*

Response: We reviewed all the data that were provided as part of the assessment process. However, not all information was considered sufficient to be used to assess streams, especially if sample collection and/or analysis questions could not be resolved.

We have carefully considered the comments we received during the review process and have provided a response for each. In cases where we do not agree with a comment, we have explained our basis. However, it should be noted that a significant number of comments that we received at the public meetings were off the topic of the 303(d) List. While we are interested in all comments, our response document is limited to those dealing with the 303(d) List.

II. GENERAL COMMENTS: Use of Criteria and Designated Uses

II-1 *As there is no organic enrichment criterion in Tennessee, it should not be used as a cause of impairment.*

Response: Tennessee uses a standardized set of causes of impairment suggested by EPA. “Organic enrichment” is one of these EPA suggested causes.

The commenter is correct that there is no water quality criterion specific to organic enrichment. Organic enrichment is a condition in which elevated levels of nutrients or other organic substances are introduced into a stream or lake. This introduction has an effect that can include stimulation of biomass or removal of water column oxygen levels. When these conditions cause undesirable ecological changes such as increased plant growth or a loss of biological integrity, the public’s beneficial uses of the stream or lake can be lost or impaired.

The conditions caused by organic enrichment are specifically covered by criteria. Examples of these conditions include elevated nutrients, loss of biological integrity, and alteration of in-stream habitat. Violation of these criteria creates the condition of pollution and such a stream should be 303(d) listed.

II-2 *The commenter understands that Tennessee has established regional nutrient goals. Are these goals available for review?*

Response: During the summer of 2003, the Water Quality Control Board promulgated an emergency rule that established a narrative nutrient criterion for Tennessee’s waterbodies. For Wadeable streams, the regulation specifically cited the regional nutrient goals identified in a 2001 division document entitled *Development of Regionally-based Interpretations of Tennessee’s Narrative Nutrient Criterion* as a proper basis for applying the narrative criterion. EPA formally approved the emergency nutrient criterion as being consistent with their guidance.

The text of the emergency rule was then incorporated into the General Water Quality Criteria [(1200-4-3-.03(i))] during the triennial review that was completed in January 2004.

The 2001 nutrient study report is posted on the department’s web page. It can be accessed at www.state.tn.us/environment/wpc/publications/

III. GENERAL COMMENTS: Assessment Methodologies

III-1. *Unless the division forwards all data used in individual assessments, the reviewer cannot adequately review these listings. Such data should be provided.*

Response: We are willing to discuss individual assessments. Some of the information utilized in the assessment process is readily accessible in public databases such as STORET. All of it is part of the formal record for this process.

However, we cannot package and individually provide to each reviewer all data used in the assessment process, for the streams of particular interest to that reviewer. Our files can be reviewed during normal working hours for those wishing to undertake an in-depth investigation.

III-2. *It is difficult to locate the impaired segments based on the information provided in the 303(d) List.*

Response: The department has posted links from its website to a mapping service for its water quality assessment information. This database is on the University of Memphis server. By clicking on a stream segment on the map, citizens will be able to tell which segments are impacted in an area and can access general assessment information.

III-3. *The federal Clean Water Act requires that all “threatened” streams be listed on the 303(d) List, something that Tennessee has not done.*

Response: EPA specifically defines “threatened” as waterbodies where a documented trend can be used to project that water quality standards will be violated before the next assessment cycle. As a practical matter, we seldom have data that so clearly documents predictable patterns in water quality.

III-4. *The State must list all impaired or threatened waters.*

Response: We agree, provided that data are available to justify such an assessment.

III-5. *High quality streams should be listed on the 303(d) List, as they need a TMDL to prevent degradation.*

Response: These waters are subject to 303(d) if they meet the listing protocol. We consider the existing antidegradation requirements found in the water quality standards to provide a much more practical shield against degradation in high quality waters.

III-6. *The State must use all existing data and provide for public input to the 303(d) listing process.*

Response: We agree and actively solicited data from other sources. We note that the regulation further defines existing data as being “readily available.” Additionally, data must be scientifically defensible.

III-7. *The division should use non-monitored data such as dilution calculations and predictive modeling to list waters as impaired.*

Response: We agree that dilution calculations and predictive modeling have an important place in assessment efforts and we have a long history of practical use of these tools to help Tennessee meet its clean water goals. However, 303(d) listings must be defensible and the best basis is provided by the collection of data from individual streams.

IV. GENERAL COMMENTS: Permitting

IV-1. *The division allows the use of general permits in 303(d) listed streams. This is inconsistent with provisions of federal regulations that require that additional loadings not be added to impaired streams.*

Response: Only general permit coverages that do not authorize additional loadings to impaired waters may be allowed.

IV-2. *The division issues permits in 303(d) listed streams, even if the required TMDLs have not been completed.*

Response: Tennessee is diligently working through all the TMDLs needed for impaired waters. In lower priority streams, it may be some time before the TMDL is completed. In the meantime, the responsibility of the division is to not authorize additional loadings of pollutants of concern to streams identified as impaired. The division adheres to an EPA-approved strategy for permitting into impaired waters.

IV-3. *The division uses the 303(d) List to set permit limits. Since listings cannot be appealed, the regulated community should be given adequate time for review.*

Response: We agree that the regulated community should review the draft 303(d) List. As established in previous responses, it is our position that the nearly two-month period provided for review of the draft is adequate for that purpose.

It is the impaired status of the stream, rather than the 303(d) listing, that provides the basis for permit conditions.

IV-4. *The 303(d) List should be promulgated as a regulation by the Tennessee Water Quality Control Board.*

Response: The issue raised by the commenter is a matter of current litigation. The state's strongly held position is that the 303(d) List is a public information report and not appropriate for promulgation as a regulation.

IV-5 *When comparisons are made between the 2002 303(d) List and the 2004 version, it becomes clear that TDEC's regulations are inadequate to control agricultural sources of pollution.*

Response: Some agricultural activities can be regulated under the TDEC's authority under the Tennessee Water Quality Control Act. Regulated activities include stream alterations, wetlands conversion, and concentrated animal feeding operations (CAFO), and point source discharges. When agricultural and forestry activities that are not regulated directly by TDEC cause an impairment to streams, we work with partner agencies to provide resources and technical assistance to land owners so they can improve management practices.

V. SPECIFIC COMMENTS

V-1. *The mileage for the impaired section of Elk Fork Creek (TN05130101091-100) is too small. More than 3.9 miles of this stream is impacted, especially in the headwaters. Additionally, a tributary, Little Elk Fork (TN05130101091-1000), should also be assessed.*

Response: We believe that the Elk Fork Creek and its tributaries are correctly assessed. TDEC has multiple sampling stations in this watershed.

Terry Creek – TDEC staff performed a biological survey (biorecon) at mile 0.4 (u/s Highway 297) in 2000. Habitat and biological index scores were high. The stream is considered fully supporting.

Lick Fork – TDEC staff performed intensive biological surveys (RBPIII) at two locations in 2003. At mile 0.9 (u/s Tulip Lane), habitat and biological index scores were in the acceptable range. At mile 3.8 (Elk Valley Road), habitat and biological index scores were also in the acceptable range. Additionally, TDEC staff performed a biological survey (biorecon) at mile 0.3 (u/s Highway 297) in 2000. Habitat and biological index scores were good. The stream is considered fully supporting.

Little Elk Creek – TDEC staff performed an intensive biological survey (RBPIII) in 2003 at mile 6.2 (Elk Valley). Habitat and biological index scores were in the acceptable range. Additionally, TDEC staff performed a biological survey (biorecon) at mile 0.1 (Highway 297) in 2000. Habitat and biological index scores were good. The stream is considered fully supporting.

Upper Elk Fork – TDEC staff performed a biological survey (biorecon) at mile 7.0 (Highway 297) in 2000. Habitat and biological index scores were good. The upper section of Elk Fork Creek is considered fully supporting.

Lower Elk Fork – TDEC staff performed a biological survey (biorecon) at mile 2.0 (near Indian Mountain State Park) in 2000. Habitat and biological index scores were below acceptable levels. The lower section of Elk Fork Creek (3.9 miles) is considered impacted.

V-2. *The source of pollutants in Straight Fork Creek (TN05130104044-0500) is given as “resource extraction.” This should be “abandoned mining” instead, as there are no active mining sites in this watershed. What is the source of the habitat alteration in this stream?*

Response: We reviewed this assessment and agree with the commenter. We will change the source to “abandoned mining” for this segment. As additional clarification, the habitat alteration referenced on this segment was the channelization of a section of the stream for the Highway 63 construction project.

V-3. *Pigeon Roost Creek should not be listed for pathogens as recent data indicate that the water quality standard is being met.*

Response: In the most recent sampling performed by the division, field staff collected monthly water quality samples from two locations on Pigeon Roost Creek during 2003. The results of this monitoring indicate that the pathogen water quality criterion is not being met.

V-4. *Pigeon Roost Creek should not be listed for nutrients. The levels of nutrients in the creek are similar to those found in a nearby reference stream.*

Response: Pigeon Roost Creek is on the 303(d) List because it violates the biological integrity standard. Additionally, the composition of the biological community indicates excess nutrients and grab sample results confirm that nutrient levels exceed the division's regional numeric interpretation of the narrative nutrient criteria. That is appropriate grounds for listing the stream as impacted by nutrients.

V-5. *Pigeon Roost Creek algae levels are lower than those cited by EPA as likely to cause impairment to the benthic community.*

Response: We respectfully disagree with the commenter's position that the documented biological impairment in Pigeon Roost Creek is unrelated to nutrient levels. The biological community in the downstream section of Pigeon Roost Creek is dominated by species tolerant of elevated organic loadings. This finding has been established by TDEC stream studies and confirmed by surveys undertaken by others.

V-6. *TDEC developed a TMDL for siltation in the Stones River watershed. What load reduction will have to be achieved before the West Fork of the Stones River can be delisted.*

Response: The TMDL developed for siltation in the West Fork Stones River proposed load reductions for many of the small tributaries to the river. These suggested load reductions ranged from about ten to fifty percent. The TMDL for the Stones watershed, which has been approved by EPA, can be accessed at the department's web page at www.state.tn.us/environment/wpc/tmdl/

The West Fork Stones is listed primarily because it fails to meet the state's biological integrity criterion. Excess silt is considered to be a significant part of the reason that the biological community has been impacted. As a practical matter, the more likely basis for delisting the stream would be that it meets water quality standards, rather than a calculated load reduction goal has been achieved.

V-7. *To what extent does the Murfreesboro Sinking Creek WWTP contribute to the listing of the West Fork of the Stones River.*

Response: A TMDL will be needed for the West Fork Stones River to identify pollutant sources throughout the watershed and to propose a control strategy for each. Prior to the TMDL being developed, we are not in a position to quantify with any precision the relative pollutant contributions of any specific source.

V-8. *Can the activities undertaken by the Murfreesboro Water and Sewer Department to alleviate the loadings of pollutants from the WWTP, such as diversion and land application of treated wastewater, allow the river to be delisted.*

Response: We are confident that the steps taken by Murfreesboro to decrease the stress on the West Fork Stones River will result in improved water quality. When water quality standards are consistently being met in the river, we will be pleased to propose delisting.

V-9. *What are the background levels of nutrients in the West Fork Stones River?*

Response: We consider the data collected at our reference streams to suitably represent background levels in Tennessee's ecoregions. The regional nutrient water quality goals established by the division for wadeable streams are based on the 90th percentile of all reference stream data. In the region that includes the West Fork Stones River, the nitrate+nitrite goal is 0.92 mg/L. For phosphorus, the goal is 0.18 mg/L.

More information about nutrient levels at reference streams can be obtained from the TDEC report *Development of Regionally-based Interpretations of Tennessee's Narrative Nutrient Criterion*, which is posted, on the department's web page at www.state.tn.us/environment/wpc/publications/

V-10. *In the 2002 303(d) list, Dog Creek (TN05130204001-0500) was listed as impaired. It is not on the 2004 List and does not appear in Appendix A as being delisted.*

Response: In the 2002 303(d) List, Dog Creek appears in Appendix C. It was considered impaired by habitat alteration, but was already covered by an EPA-approved TMDL for that condition.

The division reassessed Dog Creek for the 2004 assessment cycle. Based on recently collected data, the stream now appears to meet the biological integrity criterion. It should have been identified in Appendix A of the 2004 303(d) List as having improved. We will add this stream to Appendix A.

V-11. *In the 2002 303(d) list, Barren Fork (TN05130204006-0510) was listed as impaired. It is not on the 2004 List and does not appear in Appendix A as being delisted.*

Response: In the 2002 303(d) List, Barren Fork (now TN05130204006-0700) appears in Appendix C. It was considered impaired by siltation, but was already covered by an EPA-approved TMDL for that condition.

The division reassessed Barren Fork for the 2004 assessment cycle. Based on recently collected data, the stream now appears to meet the biological integrity criterion. It should have been identified in Appendix A of the 2004 303(d) List as having improved. We will add this stream to Appendix A.

V-12. *In the 2002 303(d) list, Bedford Creek (TN05130204010-0500) was listed as impaired. It is not on the 2004 List and does not appear in Appendix A as being delisted.*

Response: In the 2002 303(d) List, Bedford Creek appears in Appendix C. It was considered impaired by siltation and habitat alteration, but was already covered by an EPA-approved TMDL for that condition.

The division reassessed Bedford Creek for the 2004 assessment cycle. Based on recently collected data, the stream now appears to meet the biological integrity criterion. It should have been identified in Appendix A of the 2004 303(d) List as having improved. We will add this stream to Appendix A.

V-13. *The Harpeth River Watershed Association has data that indicate that Paige Branch, a tributary to Arrington Creek (TN05130204016-0500), is impaired. It should be listed on the 303(d) List even if Arrington Creek has improved.*

Response: Paige Branch is a very small tributary (three mile total length) to Arrington Creek. The listing of Arrington Creek in previous 303(d) cycles, and the proposed 2004 delisting, were based on data collected on the mainstem Arrington Creek. The division did not previously have data on Paige Branch.

We were not aware of the biological data collected by the Harpeth River Watershed Association until very recently. We agree with the commenter that these results call into question the appropriateness of including Paige Branch in with the Arrington Creek delisting. For this reason, we will separate Paige Branch from the Arrington Creek assessment and will give Paige Branch a distinct segment number.

We will reassess Paige Branch during the next assessment cycle. In the meantime, we will place Paige Branch in Category 3 (not assessed).

V-14. *TVA has attempted to mitigate dissolved oxygen and flow issues below South Holston Reservoir (TN06010102014-1000). Please make a note of this in the comments field.*

Response: We will add this comment.

V-15. *TVA has attempted to mitigate dissolved oxygen issues below Cherokee Reservoir (TN06010104001-2000). Additionally, the recent Record of Decision for the River Operations Study requires that tailwater temperatures be protective of listed species. Please make a note of this in the comments field.*

Response: We will add this comment.

V-16. *TVA has attempted to mitigate dissolved oxygen issues below Douglas Reservoir. This should be included in the comments.*

Response: We will add this comment.

V-17. *The West Prong Little Pigeon River is listed as impaired, however, the Pigeon Forge WWTP is not listed as a source. Can facilities increase their loadings if they are not named as a source of pollutants in a listed stream?*

Response: Additional loadings of a substance(s) already identified as violating water quality standards in an impaired stream cannot be authorized, regardless whether or not the facility is identified as a source on the 303(d) List.

However, it is important to note that the commenter has asked about a stream primarily impacted by pathogens. Point source dischargers are able to effectively disinfect the wastewater they discharge. Thus, the impairment of the receiving stream due to pathogens would not necessarily preclude the expansion of a point source discharger, provided that they could effectively disinfect their effluent.

V-18. *Four sources of pollution are identified on the West Prong of the Little Pigeon River. What is the relative contribution of each?*

Response: As stated in a previous response, prior to a TMDL being developed, we are not in a position to quantify with any precision the relative pollutant contributions of any specific source.

V-19. *TVA has injected oxygen into the forebay of Fort Loudoun Reservoir to improve dissolved oxygen levels. This should be included in the comments.*

Response: We will add the requested information in the comments.

V-20. *TVA has attempted to mitigate dissolved oxygen and flow alteration issues below Norris Reservoir (TN06010207019-2000). Please note this in the comments field.*

Response: We will add this comment, but note that the Clinch River downstream of Norris Reservoir is not currently listed for low dissolved oxygen.

V-21. *Clear Creek is listed as being impacted for 8.8 miles due to the oil spill. This seems to be larger than the actual area of impacts.*

Response: The commenter is correct. In the draft, we miscalculated the mileage of the impacted section, which goes from Elmer Howard Road to the mouth of Whites Creek. This will be corrected in the proposed final version, which will indicate that 1.41 miles of Clear Creek are impacted.

V-22. *TVA has plans to increase the flows from Apalachia Dam into the “bypass” section of the Hiwassee River. Please note this in the comments.*

Response: We will add this comment.

V-23. *TVA has existing agreements with the state of Tennessee and/or outfitters to provide recreational releases downstream of Ocoee # 2 and Ocoee # 3. Please note this in the comments.*

Response: We will add this comment.

V-24. *The division listed an unnamed tributary to South Chickamauga Creek (TN06020001007-0200) as impacted by habitat alteration. However, the impacts to the stream were authorized under a permit issued by TDEC. Additionally, the division accepted off-site mitigation as compensation for the damage done to the unnamed tributary. This stream should not have been listed.*

Response: The commenter is correct that the stream was 303(d) listed in 2002 after the completion of habitat alterations authorized by the division under an Aquatic Resource Alteration Permit. The Water Quality Control Act prohibits permitted activities that result in a violation of water quality standards. When unavoidable impacts to water of the state are authorized, the applicant must mitigate for any appreciable loss of resource value.

The mitigation project offered by the applicant was approved as acceptable mitigation for the unavoidable loss of uses in the impacted stream. Because no overall net loss of resource value resulted from the permitted activity, the unnamed tributary to South Chickamauga Creek should not have been listed as impacted by habitat alteration. The Division will propose delisting the stream for habitat alterations in the proposed final version of the 2004 303(d) List by moving the listing to Appendix A. EPA will have to approve the basis for this proposed delisting.

However, it should be noted that in addition to habitat alteration, the stream is also listed for organic enrichment/low DO and pathogens. The stream will need to remain listed for these causes.

V-25. *The division listed Standifer Creek (TN06020004001-0110) in Marion County as being impacted by silt from land development and pasture grazing. There is no longer much grazing in this watershed, so pasture grazing should be deleted as a source.*

Response: We reviewed this listing and agree with the commenter. We will make this revision.

V-26. *TVA has attempted to mitigate dissolved oxygen issues below Tims Ford Reservoir (TN06030003015-1000). Please note this in the comments field.*

Response: We will add this comment, but note that the Elk River downstream of Tims Ford Reservoir is not currently listed for low dissolved oxygen.

V-27. *In the 2002 303(d) list, the North Fork of the South Fork Forked Deer River (TN08010205028-1000) was listed as impaired. It is not on the 2004 List and does not appear in Appendix A as being delisted.*

Response: In the 2002 303(d) List, the North Fork of the South Fork Forked Deer River appears in Appendix C. It was considered impaired by pathogens, but was already covered by an EPA-approved TMDL for that condition.

The division reassessed the North Fork of the South Fork Forked Deer River for the 2004 assessment cycle. Based on recently collected data, the stream now appears to meet the pathogen criterion. It should have been identified in Appendix A of the 2004 303(d) List as having improved. We will add this stream to Appendix A.

V-28. *In the 2002 303(d) list, an Unnamed Trib to Fletcher Creek (TN08010210023-0200) was listed as impaired. It is not on the 2004 List and does not appear in Appendix A as being delisted.*

Response: In the 2002 303(d) List, the Unnamed Trib to Fletcher Creek appears in Appendix C. It was considered impaired by pathogens, but was already covered by an EPA-approved TMDL for that condition.

We have no additional data at this time that would justify a delisting of the stream and it appears to have been inadvertently left off the 2004 List. We will add this stream back to the 2004 proposed final version of the document.

2004 303(d) Outreach Activities

- June 8 –** Draft 303(d) posted on website.
- June 8 –** Notice mailed to addresses on Division of Water Pollution Control's public notice list.
- June 11 -** statewide press release sent out.
- June 21-** news release issued to Jackson and Dyersburg media outlets (Jackson Sun, WBBJ-TV, WDXI-AM, WZDX-FM, WTJS-AM, WMXX-FM, State Gazette, Union City Messenger and Lake Co. Banner).
- June 21-** News release issued to Memphis area media (Memphis CA, WHBQ-TV, WMC-TV, WPTY-TV, WREC-TV, KJMS-FM, WGKX-FM, WREC-AM, WMC-AM/FM, WLOK-AM, WKNP-FM, WKNO-FM, Memphis Flyer, Memphis Business Journal).
- June 24 -** News release issued to Williamson County media (Franklin Review Appeal, Williamson AM, Brentwood Journal, Associated Press).
- June 28 -** News release issued to Nashville and Murfreesboro area media (Tennessean, 4 television stations, WPLN-FM, WLAC-AM, TRN, Nashville Business Journal, Daily News Journal, Rutherford AM).
- June 28 -** Afternoon public meeting held in Jackson. Local radio and television outlet cover meeting.
- June 28 -** Evening public meeting held in Dyersburg. Local newspaper reporter attends and writes article about discussions.
- June 29 -** Afternoon public meeting held in Memphis. Local newspaper reporter attends.
- June 29 -** Evening public meeting held in Memphis (Bartlett).
- July 1 -** News release issued to Cookeville media (Herald Citizen, Sparta Expositor, Southern Standard, WHUB-Am, WPTN-AM).
- July 1 -** Evening public meeting held in Franklin.
- July 6 -** Afternoon meeting in downtown Nashville.

- July 6 -** News release went out to Tri-cities press for Elizabethton/Kingsport meetings. (Elizabethton Star, Greeneville Sun, Business Journal of the Tri-Cities, Kingsport Times-News, WCYB, WEMT, WKPT/WKPK, The Erwin Record, Johnson City Press, Jonesborough Herald and Tribune, Kingsport Daily News).
- July 6 -** News release went out to Chattanooga area press for Cleveland/Chattanooga meetings. (Chattanooga Times, Cleveland Daily Banner, Daily Post Athenian, Dayton Herald-News, WDEF, WRCB, WTVN, The Chattanooga, Bradley News Weekly).
- July 6 -** News release went out to Knoxville area press for Wartburg/Knoxville meetings (Knoxville News Sentinel, WATE, WBIR, WTNZ, WVLT, Morristown Citizen Tribune, Clinton Courier News, Maryville Daily Times, Sevierville Mountain Press, Oak Ridger, Roane County News, MetroPulse, LaFollette Press, Newport Plain Talk).
- July 6 -** Evening public meeting held in Murfreesboro.
- July 8 -** Evening public meeting held in Cookeville. Local newspaper reporter attends and writes article about discussions.
- July 12-** Additional news release sent to Chattanooga area press.
- July 12 -** Evening public meeting held in Elizabethton. Local newspaper reporter attends and writes article about discussions. TV station also attends and does story.
- July 13 -** Afternoon public meeting held in Kingsport. Local newspaper reporter attends and writes article about discussions.
- July 15 -** Another news release sent to Knoxville area press.
- July 15 -** Evening public meeting held in Cleveland. Local newspaper reporter attends and writes article about discussions.
- July 16 -** Afternoon public meeting held in Chattanooga.
- July 19 -** Evening public meeting held in Wartburg. Two local newspaper reporters attend and write article about discussions.
- July 20 -** Afternoon public meeting held in Knoxville. Local newspaper reporter attends and writes article about discussions. TV station attends and interviews participants.
- August 3 -** Public participation period ended.

Key to 303(d) List

WATERBODY ID

In 1988, the Division divided the state's waters into "waterbodies" and created a database of information about each. Each waterbody has an ID based on EPA's River Reach System. The first eight digits of the ID (after TN) are the USGS HUC Code number. The next three or four digits are the reach number assigned to the stream by EPA. The last four digits is the segment number assigned to each stream section for the Assessment Database (ADB). There is also a GIS coverage for listed streams.

The 303(d) List is sorted in hydrologic order within each major watershed basin. The NRCS watershed number for the segment is available through the ADB.

WATERBODY

The name of the main body of water within the waterbody is provided as **NAME**.

COUNTY

The county or counties where the waterbody is located.

MILES/ACRES IMPAIRED

If the stream is considered impaired (not meeting water quality standards), the number of impacted miles or acres (according to Reachfile 3) are shown in this column. Lake acres are noted as "ac".

CAUSE

The pollutant or pollutants exceeding water quality standards is identified.

SOURCE

The general source of each pollutant exceeding water quality standards within the waterbody is identified. (For both causes and sources, the Division uses categories provided by EPA in order to be consistent with language used by other states.)

TMDL Priorities

It should be noted that TMDL priorities are parameter specific and methodologies have not yet been developed for all substances or conditions. Thus a stream that has multiple causes of impairment may be high priority for one cause, but low priority for another.

HIGH (H) Tools are available to produce the TMDL and the stream is in one of the watersheds being studied in the next two years. The TMDL will be produced in the next two years.

MEDIUM (M) Tools are available to produce the TMDL, but the stream is not in a watershed being studied in the next two years. TMDL will be produced in the next five years.

LOW (L) Tools are not currently available to produce the TMDL and the stream is not in the watershed being studied in the next two years. TMDL will be produced in the next twelve years.

NOT APPLICABLE (NA) A TMDL has already been completed, submitted to EPA, and approved.

A note about the use of organic enrichment as a cause of impairment:

Organic enrichment is a condition caused by excessive nutrients or other organic materials that has an effect on aquatic resources. Under certain circumstances, the effect can be substantial and can produce the condition of pollution. Because organic enrichment can lead to impairment in streams and lakes, EPA has identified it as an appropriate assessment cause category for 303(d) listings. Assignment of organic enrichment as a cause of stream impairment should not be taken to mean that Tennessee has a water quality criteria specific to this condition. However, Tennessee does have water quality criteria for nutrients, loss of biological integrity, habitat alterations and other effects of enrichment.

Proposed Final Version - YEAR 2004 303(d) LIST FOR THE STATE OF TENNESSEE

Barren River Watershed

This small basin is USGS Hydrologic Unit Code 05110002 and flows into Kentucky as part of the Barren River watershed.

Waterbody ID	Impacted Waterbody	County	Miles/Acres Impaired	CAUSE / TMDL Priority	Pollutant Source	COMMENTS
TN05110002 008 - 0600	DONAHO BRANCH	Sumner	3.0	Nitrate M Other Habitat Alterations M Pathogens M	Collection System Failure Urbanized High Density Area Channelization	Stream is Category 5. (One or more uses impaired.)

APPENDIX A: Streams on the 2002 303 (d) List That Have Been Delisted in 2004 For Reasons Related to Water Quality

Waterbody ID	2002 Impacted Waterbody	County	Partial	Not	2002 CAUSE (Pollutant)	2002 Pollutant Source	Reason For Delisting
TN05130108 001 – 0400	ROCK SPRINGS BRANCH	Putnam	8.1		Siltation Other Habitat Alterations	Livestock in Stream Removal of Riparian Vegetation	This stream was reassessed in 2002 by TDEC. At mile 0.9 (Bates Road), biorecon results indicated 12 EPT families, 6 intolerant, and 29 total families. Using the Division scoring system for biorecons, this stream scored a 15 (scale = 1 – 15). The stream got a habitat score of 137, which is better than the established habitat goal for this region. Stream has improved greatly since last assessed.
TN05130108 048 – 1000	INDIAN CREEK	Putnam	31.0		Siltation Other Habitat Alterations	Dredging (gravel) Highway Maintenance / Runoff	This stream was reassessed in 2002 by TDEC. At mile 1.0 (Highway 96@ Hopewell Road), biorecon results indicated 8 EPT families, 2 intolerant, and 19 total families. Using the Division scoring system for biorecons, this stream scored a 9 (scale = 1 – 15). The stream got a habitat score of 125, which is better than the established habitat goal for this region. Stream has improved greatly since last assessed. Additionally, field staff now believe that the appearance of a depressed biological community in the previous assessment may have been due to a recent dry period.
TN05130202 220 – 0210	BAKERS FORK CREEK	Davidson	7.5		Pathogens	Discharges from MS4 area Industrial Permitted Runoff	This stream was posted for water contact due to elevated pathogens levels in runoff from a sludge composting facility. The facility corrected its problems and 2003 sampling indicated that water quality criteria were being met. The stream has been deposited.
TN05130202 220 – 0211	BAKERS SPRING RUN	Davidson		0.2	Nitrate Unionized Ammonia Pathogens	Discharges from MS4 area Industrial Permitted Runoff	This stream was posted for water contact due to elevated pathogens levels in runoff from a sludge composting facility. The facility corrected its problems and 2003 sampling indicated that water quality criteria were being met. The stream has been deposited.
TN05130203 023 – 0100 & 0150	WADES BRANCH	Rutherford		7.2	Siltation Other Habitat Alteration	Pasture Grazing	A siltation and habitat alteration TMDL was previously developed for this watershed and approved by EPA. This stream was reassessed in 2002 by TDEC. At mile 0.7 (Jefferson Pike), biorecon results indicated 11 EPT families, 8 intolerant, and 26 total families. Using the Division scoring system for biorecons, this stream scored a 15 (scale = 1 – 15). The stream got a habitat score of 125, which is better than the established habitat goal for this region. Stream has improved greatly since last assessed.

APPENDIX A: Streams on the 2002 303 (d) List That Have Been Delisted in 2004 For Reasons Related to Water Quality

Waterbody ID	2002 Impacted Waterbody	County	Partial	Not	2002 CAUSE (Pollutant)	2002 Pollutant Source	Reason For Delisting
TN05130203 025 – 1000	CRIPPLE CREEK	Rutherford	7.7		Siltation	Pasture Grazing	A siltation and habitat alteration TMDL was previously developed for this watershed and approved by EPA. This stream was reassessed in 2002 by TDEC. At miles 0.7 (Rob Taylor Road), biorecon results indicated 8 EPT families, 3 intolerant, and 20 total families. Using the Division scoring system for biorecons, this stream scored a 15 (scale = 1 – 15). The stream got a habitat score of 146, which is better than the established habitat goal for this region. Water quality standards were also met at a chemical station located on the creek at mile 0.4. Stream has improved since last assessed.
TN05130203 026 – 3000	EAST FORK STONES RIVER	Cannon	11.1		Other Habitat Alterations	Removal of Riparian Vegetation	A siltation and habitat alteration TMDL was previously developed for this watershed and approved by EPA. This stream was reassessed in 2002 by TDEC. At mile 50.9 (Stones River Road at Witty Road), the stream was dry. It is now our opinion that the appearance of water quality impacts at this site during the previous 1997 assessment was due to periodic dryness rather than pollution effects.
TN05130204 001 – 0500	DOG CREEK	Williamson	3.8		Siltation Other Habitat Alterations	Removal of Riparian Vegetation Bank Destabilization	A siltation and habitat alteration TMDL was previously developed for this watershed and approved by EPA. This stream was reassessed in 2002 by TDEC. At mile 0.2 (Cedar Hill Road), biorecon results indicated 10 EPT families, 8 intolerant, and 24 total families. Using the Division scoring system for biorecons, this stream scored a 15 (scale = 1 – 15). The stream got a habitat score of 115, which is better than the established habitat goal for this region. The stream has improved since last assessed.
TN05130204 006 – 0500	BARREN FORK	Dickson Hickman	10.6		Siltation	Pasture Grazing	A siltation and habitat alteration TMDL was previously developed for this watershed and approved by EPA. This stream was reassessed in 2001 by TDEC. At mile 1.5 (Spencer Mill Road), biorecon results indicated 10 EPT families, 6 intolerant, and 22 total families. Using the Division scoring system for biorecons, this stream scored a 15 (scale = 1 – 15). The stream got a habitat score of 128, which is better than the established habitat goal for this region. The stream has improved since last assessed.

APPENDIX A: Streams on the 2002 303 (d) List That Have Been Delisted in 2004 For Reasons Related to Water Quality

Waterbody ID	2002 Impacted Waterbody	County	Partial	Not	2002 CAUSE (Pollutant)	2002 Pollutant Source	Reason For Delisting
TN05130204 010 – 0500	BEDFORD CREEK	Williamson	5.0		Siltation Other Habitat Alterations	Livestock in Stream	A siltation and habitat alteration TMDL was previously developed for this watershed and approved by EPA. This stream was reassessed in 2001 by TDEC. At mile 0.6 (Bedford Road), biorecon results indicated 11 EPT families, 8 intolerant, and 27 total families. Using the Division scoring system for biorecons, this stream scored a 15 (scale = 1 – 15). The stream got a habitat score of 110, which is similar to the established habitat goal for this region. The stream has improved since last assessed.
TN05130204 016 – 0500	ARRINGTON CREEK	Williamson	24.6		Siltation	Agriculture Land Development	A siltation and habitat alteration TMDL was previously developed for this watershed and approved by EPA. This stream was reassessed in 2002 by TDEC. At miles 1.8 (Cox Road), biorecon results indicated 10 EPT families, 7 intolerant, and 25 total families. Using the Division scoring system for biorecons, this stream scored a 15 (scale = 1 – 15). The stream got a habitat score of 115, which is similar to the established habitat goal for this region. The stream has improved since last assessed. It should be noted that a small tributary to Arrington Creek, Paige Branch, is not included in this listing.
TN06010103 013 – 0210	SHELL CREEK	Carter	3.8		Other Habitat Alterations	Channelization	This stream was channelized in 1998, but has since recovered. This stream was reassessed in 2002 by TDEC. At miles 0.1 (U.S. Hwy 19E), biorecon results indicated 20 EPT genera, 18 intolerant, and 32 total genera. Using the Division scoring system for biorecons, this stream scored a 11 (scale = 1 – 15). The stream got a habitat score of 156, which is better than the established habitat goal for this region.
TN06010103 013 – 2000	DOE RIVER	Carter	6.4		Other Habitat Alterations	Channelization	This stream was channelized in 1998, but has since recovered. This stream was reassessed in 2001 by TVA. At a sampling station near the Doe River Gorge, biorecon results indicated 23 EPT families, 17 intolerant, and 41 total genera. Using the Division scoring system for biorecons, this stream scored a 15 (scale = 1 – 15).

APPENDIX A: Streams on the 2002 303 (d) List That Have Been Delisted in 2004 For Reasons Related to Water Quality

Waterbody ID	2002 Impacted Waterbody	County	Partial	Not	2002 CAUSE (Pollutant)	2002 Pollutant Source	Reason For Delisting
TN06010201 038 – 1000	TOWN CREEK	Loudon	12.9		Other Habitat Alterations Siltation	Pasture Grazing Land Development Hydromodification	This stream was reassessed in 2002 by TDEC. At mile 0.5 (Bon Road), an RBPIII survey indicated that Tennessee's biocriteria are being met (20 EPT genera, 19 total genera. Using the Division scoring system for RBPIII, this stream scored a 36, which easily passed. At mile 2.1 (Kingston Road), a second RBPIII was performed with similar results (10 EPT genera, 21 total genera, index score = 38). The sites received habitat scores of 134 and 152, respectively, which is better than the established habitat goal for this region.
TN06020002 081 - 0100	CANE CREEK	McMinn	13.7		Pathogens	Urban Runoff/Storm Sewers Pasture Grazing	The city of Etowah STP historically discharged to this stream which was previously assessed as impacted by pathogens due to sampling results from the 1990s. The stream was reassessed in 2002-2003 by TDEC, after the STP discharge was moved to another stream.. At mile 1.5 (Carlock Road), only one out of 18 E.. coli observations were over Tennessee's single sample maximum value of 941 cfu. The stream has clearly improved and should no longer be listed.
TN06020002 084 - 0500	LITTLE NORTH MOUSE CREEK	McMinn	8.5		Pathogens	Pasture Grazing	This stream was previously assessed as impacted by pathogens due to sampling results from the 1990s. The stream was reassessed in 2002-2003 by TDEC. At mile 0.1 (Highway 250), only one out of twenty-four E.. coli observations were over Tennessee's single sample maximum value of 941 cfu. The stream has clearly improved and should no longer be listed.
TN06030003 051 – 0200	BLUE SPRING CREEK	Coffee	13.0		Other Habitat Alterations	Nonirrigated Crop Production	This stream was reassessed in 2003 by TDEC. At mile 0.8 (Old Hillsborough Road), a biorecon survey indicated 11 EPT families, 8 intolerant families, and 25 total families. Using the Division scoring system for biorecons, this stream scored a 15, which easily passed. (Scale = 1 –15). The stream received a habitat score of 136, which is better than the established habitat goal for this region.

APPENDIX A: Streams on the 2002 303 (d) List That Have Been Delisted in 2004 For Reasons Related to Water Quality

Waterbody ID	2002 Impacted Waterbody	County	Partial	Not	2002 CAUSE (Pollutant)	2002 Pollutant Source	Reason For Delisting
TN06030005 084 – 1000	LITTLE SHOAL CREEK	Lawrence	20.7		Siltation	Pasture Grazing	This stream was reassessed in 2003 by TDEC. At mile 1.5 near David Crockett State Park, a biorecon survey indicated 11 EPT families, 3 intolerant families, and 28 total families. Using the Division scoring system for biorecons, this stream scored a 13, which easily passed. (Scale = 1 –15). The stream received a habitat score of 140, which is better than the established habitat goal for this region. The Little Shoal is documented habitat for a federally listed fish: the slackwater darter (<u>Etheostoma boschungii</u>).
TN06030005 106 – 0100	GRASSY CREEK	Wayne Hardin	14.9		Siltation Other Habitat Alterations	Livestock in Stream Dredging	This stream was previously assessed as being impacted by dredging activities for gravel for road construction. This activity has ceased and the stream appears to have improved. This stream was reassessed in 2002 by TDEC. At mile 0.4 (Grassy Creek Road), a biorecon survey indicated 11 EPT genera, 8 intolerant genera, and 23 total genera. Using the Division scoring system for biorecons, this stream scored a 15, which easily passed. (Scale = 1 –15). The stream received a habitat score of 159, which is much better than the established habitat goal for this region.

APPENDIX B: Streams on the 2002 303 (d) List That Have Been Delisted in 2004 For Reasons Not Related to Water Quality

Water body ID	2002 Impacted Waterbody	County	Impaired Mileage	2002 CAUSE (Pollutant)	2002 Pollutant Source	Reason For Delisting
TN060 20001 007 – 0200	UNNAMED TRIB TO SOUTH CHICKAMAUGA CR.	Hamilton	1.1	Alterations of stream-side or littoral vegetative cover	Hydromodification	<p>The unnamed tributary to South Chickamauga Creek was 303(d) listed in 2002 after the completion of habitat alterations authorized by the division under an Aquatic Resource Alteration Permit. The Water Quality Control Act prohibits permitted activities that result in a violation of water quality standards. When unavoidable impacts to waters of the state are authorized, the applicant must mitigate for any appreciable loss of resource value.</p> <p>The mitigation project offered by the applicant was approved as acceptable mitigation for the unavoidable loss of uses in the impacted stream. Because no overall net loss of resource value resulted from the permitted activity, the unnamed tributary to South Chickamauga Creek should not have been listed as impacted by habitat alteration. The Division proposes delisting the stream for habitat alterations in the proposed final version of the 2004 303(d).</p> <p>However, it should be noted that in addition to habitat alteration, the stream is also listed for organic enrichment/low DO and pathogens. The stream will need to remain listed for these causes.</p>

APPENDIX C: Federally Listed Endangered Aquatic Species in the State of Tennessee

Scientific Name	Common Name	Status	Total Obs.	Pre-1975 obs.	Post-1975 obs.	HUC location of endangered species post-1975	Extirpated since 11/1975	When Listed	Federal Register Citation

<i>Pegias fabula</i>	Little-wing pearlymussel	E	11	5 obs 1914-1966	6 obs 1981-2000	05130104 05130107 05130108	No	342	53 FR 45865; Nov. 14, 1988
<i>Plethobasus cicatricosus</i>	White wartyback pearlymussel	E	11	4 obs 1956-1964	7 obs 1978-1987	05130201 06040001	No	15	41 FR 24064; June 14, 1976
<i>Plethobasus cooperianus</i>	Orange-foot pimpleback pearlymussel	E	41	19 obs 1895-1970	22 obs 1978-1999	05130201 06010201 06010206 06020001 06040001	No	15	41 FR 24064; June 14, 1976
<i>Pleurobema clava</i>	Clubshell	E	3	0	3 obs 1978-1992	5130108 06040001	No	488	58 FR 5642; Jan. 22, 1993
<i>Pleurobema georgianum</i>	Southern pigtoe	E	11	1 obs pre-1975	10 obs 1995-1997	03150101	No	495	58 FR 14339; March 17, 1993
<i>Pleurobema gibberum</i>	Cumberland pigtoe	E	13	0	13 obs 1976-1998	05130107 05130108 06030003	No	423	56 FR 21087; May 7, 1991
<i>Pleurobema plenum</i>	Rough pigtoe	E	17	3 obs 1920-1964	14 obs 1979-1998	05130201 06010205 06020001 06040001	No	15	41 FR 24064; June 14, 1976

APPENDIX C: Federally Listed Endangered Aquatic Species in the State of Tennessee

Scientific Name	Common Name	Status	Total Obs.	Pre-1975 obs.	Post-1975 obs.	HUC location of endangered species post-1975	Extirpated since 11/1975	When Listed	Federal Register Citation
<i>Ptychobranchus greeni</i>	Triangular kidneyshell	E	2	0	2 obs 1980-1995	03150101	Yes*	495	58 FR 14339; March 17, 1993
<i>Quadrula cylindrica strigillata</i>	Rough rabbitfoot	E	24	1 obs 1960	23 obs 1975-1999	06010205 06010206	No	602	62 FR 1657; Jan. 10, 1997
<i>Quadrula intermedia</i>	Cumberland monkeyface pearlymussel	E	45	15 obs 1900-1973	30 obs 1975-2001	06010206 06030003 06040002	No	15	41 FR 24064; June 14, 1976
<i>Quadrula sparsa</i>	Appalachian monkeyface pearlymussel	E	11	2 obs 1958-1964	9 obs 1976-1998	05130201 06010206	No	15	41 FR 24064; June 14, 1976
<i>Toxolasma cylindrellus</i>	Pale lilliput pearlymussel	E	13	10 obs 1886-1970	3 obs 1982-1995	06030002 06040002 06040003	Yes*	15	41 FR 24064; June 14, 1976
<i>Villosa perpurpurea</i>	Purple bean	E	10	3 obs 1913-1970	7 obs 1985-2000	06010104 06010208	No	602	62 FR 1657; Jan. 10, 1997
<i>Villosa trabalis</i>	Cumberland bean pearlymussel	E	17	4 obs 1913-1939	13 obs 1980-2000	05130104 05130108 06010104 06010208 06020002	No	15	41 FR 24064; June 14, 1976
Snails									
<i>Athearnia anthonyi</i>	Anthony's River Snail	E	14	6 obs 1941-1965	8 obs 1975-1994	06010201 06010205 06020004 06030001	No	538	59 FR 17998; April 15, 1994
<i>Pyrgulopsis (Marstonia) ogmorhapse</i>	Royal marstonia (Obese snail)	E	4	0	4 obs 1997	03150101	No	538	59 FR 17998; April 15, 1994

*Note: None of the extirpated species have been found on segments listed as partially or non-supporting on the 2002 303(d) List.
See the 2002 303 (d) List for endangered species located on partially or not-supporting waterbody segments.

Status:

E = Endangered

T = Threatened
